Slide title goes here

This is an example content slide — use it as a starting point. The section name appears top-left, the slide number inside the arc top-right, and the uni.lu / SnT logos along the bottom. The small icon at the bottom centre jumps to the Contents page.

- First key point of the talk
- Second key point, with a little more detail
- Third key point

Another slide in the same section

Each `\subsection` adds an entry under its section on the Contents page and on the per-section divider that opens the section.

- Contribution one
- Contribution two

Equations and highlights

An example display equation:

$$\mathcal{F} = \frac{1}{2}(1 + \langle \psi | \rho | \psi \rangle).$$

Key idea

Use a block to highlight a definition, a result, or the main takeaway of the slide.

Figures

Insert figures with `\includegraphics`. Missing files render as a placeholder box (see the preamble), so the deck always compiles.

A rectangular box with a thin black border. Inside the box, the text "Missing figure" is centered on the top line, and "img/example.pdf" is centered on the bottom line.

Missing figure
